Abstract

Although there are economic developments today, increases in negative social and environmental conditions. Sustainable development is to improve a better quality of life for current and future generations. Sustainable entrepreneurs develop products and services that are suitable for society and the environment instead of using traditional business processes and systems. Sustainable development and providing a livable life for future generations depend on these entrepreneurs' use of innovation in their business processes and the effects of this situation on society. The aim of this study is to conceptually address the importance of international policies in sustainability entrepreneurship within the framework of the European Union's climate change and environmental sustainability policies, by conceptually addressing the social, environmental and economic dimensions of sustainable development. The literature review methodology provides the advancement of knowledge by scoping and analyzing previous research on the study. A literature search will be made on the method of the study, and determinations and suggestions will be presented within the framework of the purpose of the study. The data is collected from European Commission and Eurostat database. Countries by protecting the environment, entrepreneurship plays an important role in the transformation towards a more sustainable future and in harmonizing social, economic and ecological goals. Climate change is one of the most important challenges of the 21st century. The environmental policy of the European Union has improved as climate change has become more prominent. The EU's policies on climate change and environmental sustainability create opportunities for technological development and sustainable entrepreneurship.
